

Free Memory Screening

Get screened for early signs of memory loss

Are you concerned about your memory?

As we get older, it is important to recognize any changes we may experience, especially in relation to our memory. A memory screen is defined as a wellness tool that helps identify possible changes in memory and cognition. This is not a diagnostic tool, but a screen that can provide early detection for dementia.

How does a memory screen work?

The memory screen is very simple. You will be asked to answer some questions and complete a task. The memory screen is at no cost. The screen takes about 15 minutes.

When: November 16, 2023

Location: Oasis Community Center

Address: 2414 W Mitchell St. Milwaukee, WI 53204
